Science and Engineering Practices Station Rotations

Directions:

1. There are 7 stations set up around the room. You will work in pairs and can visit the stations in any order.

2. The purpose is not to do the activities. Of course, they can be hands-on and play with the materials (and should-----it's more fun that way!); however, keep in mind that your task is to read the instructions on each station card and identify the practice best represented by the <u>underlined portion</u> of the prompt.

3. Some prompts clearly target one practice, and some are more vague in order to spark thoughtful discussion.
    a. Additionally, some stations might include multiple practices in different parts of the instructions, but they should focus on the <u>underlined portion</u> of text and identify the one practice best represented by that phrase.

4. You will have ~20 minutes to visit the stations. The clock has been set on the screen in the front.

5. After you finish exploring, you should put a tally mark on the chart to vote for the one practice you identified at each station. These tallies will be a starting point for our class discussion.
