

Math Refresh Summer Webinar Series

The Louisiana Department of Education is excited to announce the Math Refresh summer webinar series. School and system leaders should register to learn how to impact math instruction in the coming year. In addition, participants will explore newly released resources to accelerate learning and build foundational math knowledge. Register with your school or system email address using the links below.

Webinar Topic	Zoom Link
<p>The State of Math This webinar will update leaders on the math initiatives and policies enacted over the past year, their impacts, and how the Department plans to continue supporting systems in growing student and teacher mathematics knowledge.</p>	<p>Recording Slides</p>
<p>Leading New Math Implementation This webinar will share best practices to successfully transition to a new mathematics curriculum. In addition, school and system leaders will analyze current plans and consider ways to support teachers through the first years of adoption.</p>	<p>Recording Slides</p>
<p>Leading Zearn Implementation The Department will share the results of the Zearn Impact Study and resources to support implementation for the Fall of 2023. Leaders will have the opportunity to hear the Department’s recommendation, see sample schedules, and collaborate on best practices to support Zearn Implementation.</p>	<p>Recording Slides</p>
<p>Accelerating Math Learning This webinar will briefly overview the Accelerate Math guidance and resources and clearly define the Department’s Accelerate strategy related to mathematics. We will then outline the acceleration approach, the cornerstone of the provided resources, and tour the Accelerate Math resources.</p>	<p>Recording Slides</p>
<p>Build Fluency with New Math Fluency Resources This webinar will preview the Department’s coming math fluency resources available for classroom teachers by the Spring of 2024. These resources are designed to build and monitor foundational math fluency for students in grades K-5.</p>	<p>Recording Slides</p>
