# Louisiana Department of Education $21{ }^{\text {st }}$ Century Community Learning Centers and Supplemental Education Services Programs: Evaluation Report School Year 2012 

Introduction

In June 2010, SEDL began a 3-year evaluation of the Louisiana Department of Education (LDE) after-school programs. SEDL was tasked to study the progress and outcomes of the $21^{\text {st }}$ Century Community Learning Centers ( $21^{\text {st }} \mathrm{CCLC}$ ), Supplemental Educational Services (SES), and Temporary Assistance for Needy Families/After-School For All (TANF) programs throughout the state. This report presents SEDL's Year 3 (June 1, 2011-May 31, 2012) evaluation findings on the outcomes for two of the three after-school programs, since the TANF program was discontinued after the 2010 school year.

## Evaluation Design

This 2012 evaluation report of LDE after-school programs is the final of three reports that SEDL has prepared. SEDL's evaluation approach involves multiple iterative phases integrating 1) a comprehensive database housing descriptive program and participant data to provide descriptive profiles, 2) a quasi-experimental design to assess the impact of the $21^{\text {st }}$ CCLC and SES programs, and 3) a stakeholder survey to assess satisfaction.

## Evaluation Framework

SEDL's approach for the $21^{\text {st }}$ CCLC and SES Year 3 evaluation provides formative information that supports ongoing improvement as well as summative information regarding program effectiveness in achieving critical student outcomes. SEDL's Year 3 evaluation is based on the revised framework for evaluating after-school programs and/or out-of-school time providers, adopted by LDE in February 2012, and provided to SEDL at that time (see Appendix A). SEDL also used this revised evaluation framework in the Year 2 evaluation. SEDL's evaluation of LDE's after-school programs provides LDE with results on provider/grantee/site academic effectiveness (85\%) and stakeholder satisfaction (15\%) which LDE includes in its rating of its after-school programs (see Figure 1).

Figure 1. Components of SEDL's Evaluation of Louisiana's After-School Programs

SEDL's results are combined for LDE to determine a performance category for each provider. LDE's performance categories include:

- Exemplary = The provider has met compliance requirements, has demonstrated positive achievement effects with significantly more academic improvement in ELA or math compared to matched controls, and demonstrated positive stakeholder satisfaction responses. The provider is recommended to apply for the following year.
- Satisfactory = The provider has met compliance requirements, has demonstrated positive achievement effects compared to matched controls, and demonstrated positive stakeholder satisfaction responses. The provider is recommended to apply for the following year.
- Probation = The provider has met compliance requirements or has minor compliance violations and has not demonstrated positive achievement effects compared to matched controls. Provider must submit a corrective action plan within 30 days of designation. Failure to address deficiencies will result in removal. Provider can be in Probation status for only one year.
- Termination $=$ The provider has serious compliance violations and/or has not demonstrated positive achievement effects compared to matched controls and positive stakeholder satisfaction responses. The provider also may have been on Probation status the prior year and failed to produce positive achievement effects. Program will be labeled as 'high risk' and must show program effectiveness to apply for future funding.

## Evaluation Objectives

Using LDE's framework, SEDL's approach to the evaluation focuses on three main objectives: (1) describing LDE's after-school program and participant characteristics, (2) assessing program impacts, and (3) determining satisfaction with LDE's after-school programs.

To provide descriptive information about LDE's after-school programs and participants, SEDL developed profiles of the individual providers, as well as site-level profiles for the $21^{\text {st }}$ CCLC program. These profiles provided a descriptive foundation to assist LDE in supporting its after-school programs.

To show evidence of after-school program effectiveness is an important objective of this evaluation. In Year 3, SEDL used a quasi-experimental design to determine the academic progress of students participating in the after-school programs in comparison to matched students not participating in LDE's after-school programs.

To hear from stakeholders is another significant evaluation objective. SEDL assessed stakeholder satisfaction with the quality of after-school programs through survey responses submitted by participants' parents, school or LEA staff and administrators, and after-school providers and staff.

## Data Sources and Database Development

The first major step SEDL and its subcontractor, Utilistar, Inc., undertook was to create a Year 3 evaluation database for both of LDE's after-school programs, which enabled analyses to be completed, online profiles to be developed, and reports provided to LDE. All of these data were extant, housed and managed by LDE or LDE's after-school data system contractors.

LDE's two data system contractors for the $21^{\text {st }}$ CCLC and SES programs provided SEDL with 2012 after-school program data, including student demographics and program activity, in July/August 2012. For the $21^{\text {st }}$ CCLC data, SEDL obtained five data files: participant data, activity data, staff data, grantee data, and attendance data. Most of the SES data were provided in one database, with one additional file for a provider that used a separate input system. The file was later merged into the main SES database. For both after-school programs, the data had been input by the after-school providers, with additional SES data input by LEA staff. SEDL also received 2012 Student Information System (SIS) and student assessment data files from LDE in August 2012 (see Appendix B for a list of data elements SEDL received from LDE).

To develop the evaluation database for this Year 3 report, SEDL began a process of cleaning and managing the extant data to be used in the descriptive and comparative analyses. SEDL staff reviewed all of the after-school program data to be aligned and merged with the LDE student and assessment data. SEDL designated LDE's SIS and student assessment data files as the master student data files, i.e., data in these two files were assumed to be the most accurate and, therefore, used in SEDL's evaluation database for corresponding after-school program data elements.

Although the quality of the data improved from previous years of evaluation, the cleaning process remained extensive in Year 3, particularly for the $21^{\text {st }}$ CCLC data. SEDL found much of these data were missing and/or inaccurate. This issue was especially true for students' social security numbers (SSN), used to identify individual participants across the
myriad databases. SEDL took six initial steps to identify the evaluation sample and begin database development. SEDL evaluators:

1. Searched and identified participant cases in the after-school databases with after-school activity time in school year 2012.
2. Ensured accurate student SSNs to be able to merge the databases.
3. Consolidated duplicate case records into unique individual records.
4. Determined whether the after-school activity was in ELA, math, a combination of these two subject areas, or another activity.
5. Created the same variable names and values as in the Year 1 and Year 2 databases, as well as the various extant databases to eliminate redundant data.
6. Identified a master source file of extant data (SEDL used SIS) and ensured the file's data were used when conflicting values for identical variables across databases were found.

## Determining an Accurate Student Identifier

As mentioned, SEDL evaluators used a student's SSN as the main identifier across the various databases. For the $21^{\text {st }}$ CCLC extant data, the LDE data system contractor generated a separate identifier for each student that SEDL also used. The $21^{\text {st }}$ CCLC participant data file for June 1, 2011 - May 31, 2012 that SEDL received contained 46,487 cases (i.e., each case is a separate line of data). SEDL matched these cases with the activity and attendance $21^{\text {st }}$ CCLC data files and found there were 42,154 distinct individuals with after-school activity time in the relevant cohorts ( 6,7 , and 7.5 ) during this time frame. Of these distinct individuals, $1,035(2.5 \%)$ had no SSNs needed for SEDL's analyses. SEDL identified 889 of those with missing SSNs by matching participant information to that in LDE's SIS and assessment databases. Moreover, SEDL evaluators found that of the remaining 41,119 unique individuals for whom the after-school, LEA, or other school staff entered SSNs, 8,175 (20\%) were incorrect. In total, for 2012, SEDL identified 42,154 distinct individuals with $21^{\text {st }}$ CCLC activity, 40,000 with SSNs and 2,154 without SSNs.

For the same time period, the final SES data file that SEDL received contained 12,808 cases, 12,162 of which had activity time and corresponding SSNs. However, 102 cases ( $<1 \%$ ) of the 12,162 cases had a SSN that did not align with the SSN assigned to that student in the LDE SIS or assessment data. Of those 102, SEDL was able to identify the a correct SSN for 101. After consolidating duplicate individuals in the 12,162 cases, SEDL identified 10,691 distinct individuals with SES activity for 2012, 10,690 with SSNs and one without a SSN.

## Determining Subject-Specific After-School Activity

The extant data for the $201221^{\text {st }}$ CCLC participants' attendance and activity included $3,610,556$ entries, with multiple entries per participant. Data fields included activity subject areas, service categories/names/types, and the amount of time the student attended the activity. Because ELA and math were the two academic outcomes SEDL studied, it was important to determine which of the after-school activities constituted instruction in these two subjects and how much time students were engaged in these subjects. To do this, SEDL compared the data across multiple activity/service variables in the $21^{\text {st }} \mathrm{CCLC}$ extant data.

Grantees could enter one or multiple categories for an activity in the $21^{\text {st }}$ CCLC database. After-school providers selected from one or more of 13 categories and "other" for this data element, including:

- Academic enrichment learning programs
- Activities promoting family literacy
- Activities promoting parental involvement
- Activities to promote youth leadership
- Career/job training for youth or adults
- Community service/service learning
- Drug/violence prevention, counseling, or character education
- Expanded library service hours
- Homework help
- Mentoring
- Recreational activities
- Supplemental education services
- Tutoring

A second data element in the $21^{\text {st }}$ CCLC database was the subject area for the activity. Again, grantees had the opportunity to select one or multiple subject areas for an activity. There were eight subject areas and "other" that could be entered for this data element.

- Arts and music
- Cultural activities/social studies
- Entrepreneurial education
- Health/nutrition-related activities
- Mathematics
- Reading/literacy
- Science
- Technology/telecommunications

SEDL's review of the $21^{\text {st }}$ CCLC Year 3 extant data revealed significantly fewer classification issues than in previous years of evaluation. For example, whereas in Years 1 and 2 grantees sometimes itemized in a single entry a laundry list of service names, categories, and subject areas that did not seem analogous, in Year 3, grantees included separate entries on ELA and math time spent during the after-school activities. Nevertheless errors in data entry still occurred and SEDL employed a matrix of rules used in previous years for assigning a designation to the activity data provided for SEDL's 2012 evaluation database. The categories included: ELA, math, a combination of ELA/math, or "other activity" (see Appendix C for SEDL's academic coding rules for $21^{\text {st }}$ CCLC). For $21^{\text {st }}$ CCLC, SEDL used these categories to analyze subject area activity time in its Years $1-3$ analyses.

SES activity data entered by the provider did not include the extent of information in the $21^{\text {st }}$ CCLC data. SES providers identified activities by subject area, including ELA, math, reading, and combinations of these areas. For SES, SEDL used these categories to analyze subject area activity time in its Years $1-3$ analyses.

## Evaluation Database

SEDL created a database housing all of LDE's after-school programs in operation over June 1, 2011 to May 31, 2012 that was merged with the Years 1 and 2 databases. The database was structured to allow for the addition of new and updated student and program data for Year 3. Each student accounts for one case in the database, with all of the applicable program data over time for that student. SEDL created a variable to differentiate student participation in $21^{\text {st }}$ CCLC, SES, or a combination of both programs given that some students could attend one or more of both of these programs in a given year. A different variable was created to identify students who also participated in after-school programs during the previous (2010-2011) school year.

To ensure an ongoing quality assurance system, SEDL and Utilistar conducted frequent "checkpoints" of the database as development continued and performed random checks of the aggregated data against the feeder sources and against prior input after significant changes. These safeguards provided a mechanism for identifying and most efficiently correcting errors.

## Sample

## Year 3 Evaluation Participants

The Year 3 sample included 51,169 unique, non-duplicative student records representing students receiving after-school services in the $21^{\text {st }}$ CCLC and SES programs from June 1 , 2011, to May 31, 2012, or approximately $7 \%$ of LDE's total 2012 student population ${ }^{1}$. Of the 51,169 participants, there were $42,15421^{\text {st }}$ CCLC participants who received services from after-school grantees who started their current funding cycle after May 1, 2009 (cohorts 6, 7, and 7.5). There were 10,691 SES participants receiving after-school services. Of these students, there were 1,676 who received both SES and $21^{\text {st }}$ CCLC services, resulting in the total 51,169 total after-school sample. The students who participated in both $21^{\text {st }}$ CCLC and SES programs were included in the separate program analyses for both programs.

Of the 51,169 unique participants in LDE's after-school programs in 2012, SEDL validated SSNs for 49,014 (96\%). Available student data (e.g., demographics, grade levels, etc.) from the after-school programs rather than from LDE's SIS data were used in analyses, where appropriate, for the 2,155 students without SSNs.

> In 2012, 42,154 students participated in the $21^{\text {st }}$ CCLC program through 58 afterschool provider grantees in 217 individual after-school sites, and 10,691 students received SES from 37 providers. There were 1,676 of these students who participated in both programs.

## $21^{s t}$ CCLC Participants

Of the 42,154 students with $21^{\text {st }}$ CCLC activity in 2012 , SEDL validated or identified SSNs for 40,000 students. The remaining 2,154 students that could not be validated were kept in SEDL's evaluation database with limited demographic and after-school data for analysis but excluded from analyses involving academic achievement. According to these records, students received services from $5821^{\text {st }}$ CCLC grantees in 217 after-school sites.

In Year 3, the 42,154 students participating in $21^{\text {st }}$ CCLC programs were mostly low-income (85\%), African-American (79\%), and English proficient (98\%). Other student ethnicities represented in the $21^{\text {st }}$ CCLC program included 14\% Caucasian, $2 \%$ Hispanic, 2\% multiple ethnicities, $2 \%$ American Indian/Alaskan Natives, and $1 \%$ Asian (see Figure 2). The $21^{\text {st }}$ CCLC students were $51 \%$ female, and $10 \%$ received special education services in their schools (namely, if the student had any disabled exceptionality, primary or secondary).

The $21^{\text {st }}$ CCLC students attended 976 different schools in 113 districts. In Year 3, most of the $21^{\text {st }} \mathrm{CCLC}$ participants were in elementary school ( $59 \%$ ). Two percent were in PreK, $24 \%$ were in grades $6-8$, and $15 \%$ were in high school (see Figure 3 ).

[^0]Figure 2. $201221^{\text {st }}$ CCLC Participants by Ethnicity

Figure 3. Percentage of Year $321^{\text {st }} \mathrm{CCLC}$ Participants by Grade Level in 2012

SES Participants
For 2012, SEDL validated SSNs for all but one of the 10,691 SES students (99.9\%). Of the 10,691 SES participants, $51 \%$ were female. Ninety-five percent of the SES participants were low-income, and $97 \%$ were English proficient. As seen in Figure 4, the majority of students in SES programs were African-American (89\%), another 5\% were Caucasian, 2\% were Hispanic, 2\% of multiple ethnicities, and 2\% were Asian, American Indian/Alaskan Native, or Native Hawaiian/Pacific Islander. A slightly larger percentage of SES students (13\%) received special education services compared to students in the $21^{\text {st }}$ CCLC program (10\%).

The SES students attended 340 different schools in 57 districts. Thirty-eight percent of SES participants were in elementary school (K-5), $31 \%$ were in grades $6-8$, and $31 \%$ were in high school (see Figure 5).

Figure 4. 2012 SES Participants by Ethnicity
Figure 5. Percentage of Year 3 SES Participants by Grade Level in 2012

## After-School Participants With Achievement Data for 2012

To complete analyses related to student outcomes and select a matched comparison group of non-participants, SEDL needed to identify students with 2012 standardized test data in ELA or math, i.e., raw score, scaled score, or achievement-level data. Of the 50,690 afterschool participants with validated SSNs (40,000 in $21^{\text {st }}$ CCLC and 10,690 in SES, including 1,676 in both programs), the subsample of students with achievement test data totaled $28,396(56 \%)$, excluding students tested in the summer term, whose scores were not available at the time of this report. Almost all of these students were English proficient ( $98 \%$ ), $90 \%$ were low-income, and $12 \%$ received special education services. There were slightly more females ( $51 \%$ ) than males. The majority of these students ( $83 \%$ ) were AfricanAmerican (see Figure 6). The students attended 832 schools, $56 \%$ of which were elementary schools, $42 \%$ were middle schools, and $2 \%$ were high schools (see Figure 7).

Figure 6. 2012 After-School Students With Achievement Data by Ethnicity

Figure 7. Percentage of Year 3 After-School Students With Achievement Data by Grade Level in 2012

Of the 28,396 after-school participants with 2012 achievement data, 23,818 were $21^{\text {st }}$ CCLC students attending 57 grantee programs in a total of 216 sites, and 5,765 were SES students receiving services from 36 providers. A total of 1,187 of the 28,396 students participated in both after-school programs.

In Year 3 of SEDL's evaluation, there were 22,773 after-school students either not tested ( 20,618 students) or with no information to identify the student to retrieve achievement data (2,155 students). These students were 78\% African-American and 14\% Caucasian, 83\% low-income, and almost all English proficient (98\%). There were slightly more females (51\%) than males. Overall, these students attended 780 schools, with $9 \%$ of the students receiving special education services. Statistical tests confirmed this subsample of students was equivalent to the larger after-school population sample for ethnicity, English proficiency, grade level, gender, and special education status ( $p<.05$ ).

The majority $(60 \%$ or 12,371$)$ of the 22,773 students who did not have 2012 achievement data were in grades in which students were not tested on Louisiana's standardized achievement tests (LEAP, iLEAP, GEE, LAA 1, and LAA 2). This group included after-school students in PreK- Grade 2 as well as those in Grade 12. An additional 8\% $(1,649)$ of the 22,773 students were in Grade 11 and were tested, but not in ELA and math. The remaining students with no achievement data $(6,598)$ were identified in grades that LDE tested in ELA
and math; however, SEDL evaluators were unable to determine the reason these students did not have achievement data associated with their SSNs in LDE's assessment data.

Of the 22,773 students with no achievement data, 18,336 students participated in the $21^{\text {st }}$ CCLC program at 217 sites, 4,926 students participated in the SES program at 36 providers, and 489 students participated in both programs.

## Matched Comparison Students

To select the matched comparison group of students not attending LDE after-school programs, SEDL began with the 884,260 students in LDE's SIS database for 2012. SEDL first removed any duplicate student ids from the database, followed by the removal of the 49,014 after-school participants in Year 3 with SSNs ( 2,155 additional after-school students had no SSN and thus were not identifiable for removal from the SIS database).

SEDL next employed propensity score matching techniques to determine the matched group of students not attending LDE after-school programs. Compared to one-to-one student matching, using a propensity score matching method has been found to provide more precise effect estimates by decreasing potential limitations and maximizing the sample (Joffe \& Rosenbaum, 1999; Rosenbaum \& Rubin, 1983). This step was accomplished by using variables in the propensity score matching from previous research that influence students' academic performance and other outcomes being studied in this evaluation (Black, Doolittle, Zhu, Unterman, \& Grossman, 2008; Miller \& Hall, 2007). SEDL used the following 10 variables from the evaluation database.

- 10/11 achievement score in ELA and math
- Income level (free/reduced price lunch)
- School
- Gender
- English proficiency
- Grade level
- Ethnicity
- District
- Special education
- Native language

As seen in the literature, some of the matching variables have greater impact on student outcomes than others (Durlak \& Weissberg, 2007; Lareau, 2003). Therefore, SEDL specified those variables with greater importance, such as previous test achievement and income level. To best ascertain the propensity scores needed to find the matched comparison group, SEDL input the variables into stepwise logistical regressions, as matching variables. Propensity scores for both evaluation groups were taken to the $16^{\text {th }}$ decimal place. SEDL performed matching success rate analyses and found that an average of $11 \%$ of the tested after-school students had an exact match on all 10 matching variables at the $16^{\text {th }}$ decimal place ( $22 \%$ for students tested with Leap and iLeap; $8 \%$ for LAA 2; and $3 \%$ for LAA 1). Based on the propensity score matching analysis, $99.9 \%$ of after-school participants with 2011 and 2012 achievement scores (22,544 students) also had a corresponding matched student with 2011 and 2012 achievement scores (22,543 matched students). SEDL used these matched students in its comparative analyses of 2011-2012 academic growth. Statistical tests confirmed the two groups of students, after-school and matched, were equivalent on the ten variables ( $p<.05$ ).

## Students With Longitudinal Achievement Data

SEDL next created a subsample from the after-school and matched non-participant students to complete comparative growth analyses for student academic achievement from 2011 to 2012. The subsample included only students with both 2011 and 2012 achievement scores
in ELA or math. SEDL found 22,544 of the 28,396 (79\%) after-school students that had 2012 achievement data also had 2011 achievement data. There were 22,252 after-school students with both ELA and math scores for the 2 years, another 131 students with just ELA for both years, and an additional 161 with just math for both 2011 and 2012. For the comparison group, SEDL found 22,543 matched students with 21,830 that had both ELA and math scores for 2011 and 2012, 309 additional students who had just ELA for both years, and 404 who had just math scores for the 2 years.

Of the subsample of 22,544 after-school students with 2011 and 2012 achievement scores, 18,685 were $21^{\text {st }}$ CCLC participants in 57 grantee programs including 214 sites representing 724 schools. For SES there were 4,842 students who received services from 36 SES providers and attended 237 schools. Of the total 22,544 students, 983 received services from both after-school programs.

## Methods

## Measures

SEDL's evaluation included performance measures at the grantee/provider level for both LDE after-school programs and at the site level for the $21^{\text {st }} \mathrm{CCLC}$ program. After-school grantees initially contract with LDE to provide a specified amount of program hours and content to disadvantaged and academically struggling students. LDE monitors program compliance on these performance measures as part of determining program effectiveness. SEDL used participation rates, program content, and student socioeconomic status as measures of program performance in addition to student outcome measures.

During Year 3 for each program, grantee/provider, and site, participant rates included the number of students attending; the number of hours a student participated; the number of students attending 30 or more days and 60 or more hours ( $21^{\text {st }}$ CCLC grantees/sites only); and the total number of service hours provided. There were four types of program content measured: ELA, math, a combination of ELA and math, and other content (refer to section Determining Subject-Specific After-School Activity on p. 4 for more detail). Student socioeconomic status was measured using free and reduced price lunch eligibility.

## Academic Achievement Tests

SEDL's evaluation also included five measures of test results for ELA and math consisting of raw and scaled scores and achievement performance levels. SEDL used the Louisiana Educational Assessment Program (LEAP) tests, administered in grades 4 and 8; the Integrated Louisiana Educational Assessment Program (iLEAP) tests, administered in grades $3,5,6,7$, and 9; and the Graduation Exit Examination (GEE), administered in grade 10. Additionally, SEDL included the results from LDE's two alternate assessment tests: the LEAP Alternate Assessment, Level 1 (LAA 1), administered in grades 3-8 and Grade 10, and the LEAP Alternate Assessment, Level 2 (LAA 2), available for students in grades 4-8 and $10 .{ }^{2}$ Recognizing the major limitations in vertical alignment across LDE's achievement tests, SEDL calculated standardized $z$-scores for the LEAP, iLEAP, and GEE tests used in

[^1]analyses over time. For more detail on LDE's standardized achievement tests, labels, and scoring, go to http://www.louisianaschools.net/testing/.

## Stakeholder Surveys

SEDL developed three different surveys that were administered to each of the three stakeholder groups: participants' parents, after-school providers and staff, and school administrators and teachers with each survey asking similar questions (see Appendix F). Table 1 provides an overview of the three types of stakeholder surveys as well as survey topics covered in the survey questions.

Table 1: Type of Stakeholder Survey and Stakeholder Survey Topics

| Type of Surveys | Survey Topics |
| :---: | :---: |
| Parent Survey | Communication with after-school provider (2a.-2d.) <br> Satisfaction with the program services (3a.-3d.) <br> Impact on students (4a.-4d.) <br> What they like best about after-school provider (5. Open-ended) <br> What they would like to see changed (6. Open-ended) |
| After-School Provider Survey | After-school staff communication with school teachers, parents, other after-school staff, school administrators, and students (3a.-3c. and 4f.) Quality of content and after-school practices (3e.-3g.) <br> Satisfaction with the program services (4a.-4e.) <br> Impacts on students (5a.-5e.) <br> What they like best about after-school program (6. Open-ended) What they would like to see changed about after-school program (7. Open-ended) |
| School Administrator/ Teacher Survey | After-school staff communication with school administrator/teacher (3a1-4. and 4f.) <br> Quality of content and after-school practices (3b. and 3c.) <br> Satisfaction with the program services (4a.-4e.) <br> Impacts on students (5a-5d.) <br> What they like best about after-school program (6. Open-ended) <br> What they would like to see changed about after-school program (7. Open-ended) |

The surveys collected quantitative and qualitative data; only quantitative data was used to determine stakeholder satisfaction. The quantitative portion addressed stakeholders' perceptions about their level of communication with other stakeholders affiliated with their after-school program, their perceived satisfaction with the program services, and satisfaction with the program impact on students. Concurrently, qualitative data from open-ended questions were provided for stakeholders to comment on what they liked best about their after-school program, what they would like changed, and any additional comments they would like to provide about their program. The stakeholder surveys generated responses that were included in the calculation of an LDE 2012 performance rating for each $21^{\text {st }}$ CCLC grantee and SES provider.

## Survey Administration

All $21^{\text {st }}$ CCLC and SES providers serving students between June 2011 and May 2012 were contacted in mid-March 2012 via email by LDE and instructed to notify parents, program staff, and school staff about how to access and complete the satisfaction surveys online. While each participant was strongly encouraged to complete a survey online, they were also
given the opportunity to print a hard copy of the survey and mail it to SEDL. Stakeholders were given three weeks to complete the survey; however, LDE and SEDL received requests for additional time. As a result, stakeholders were given an additional two weeks to submit completed surveys by April 20, 2012. Utilistar, SEDL's subcontractor, created an online survey tracking system made available to all after-school programs that identified how many surveys were completed online for each of the three stakeholder groups. SEDL entered the responses from paper surveys received by mail. These were also included in the tracking numbers once manually entered into the online system.

## Data Analysis

SEDL implemented descriptive and quasi-experimental methods to assess the impact of LDE's after-school programs as well as to construct program grantee/provider and site profiles. Descriptive analyses included frequencies, means, and percentages. Quasiexperimental analyses included matched comparisons focused on estimating the effects of participation in the after-school programs on student outcomes annually and over time for participating students relative to non-participating students. To ascertain the overall program effects for $21^{\text {st }}$ CCLC and SES, SEDL utilized a combination of $t$-tests for mean differences, linear regression, and logistic regression techniques. Determining program satisfaction included descriptive analyses of survey responses.

Survey data were converted directly into Microsoft Excel providing distinct files for each stakeholder group's responses: one for parents, another for after-school staff, and a third for school administrators/teachers. The types of participants within each stakeholder group are listed below.

- Parents- students' parents and/or guardians
- Program staff- LEA grant administrator or coordinator, program director/coordinator/other administrator, instructor/tutor/direct services to student, site administrator/coordinator, counselor/supportive services, intern/assistant, volunteer, or other
- School staff— principal or other school administrator, school programs coordinator, teacher, teaching assistant or aide, curriculum specialist, counselor or other supportive services, or other

For each survey, the percentages of positive responses were calculated. Responses such as "Sometimes", "Often", "Moderately", and "Extremely" represented positive responses, while all others were considered non-positive. For each type of survey and grantee/provider, the responses to all survey questions were averaged. Positive response percentage totals were calculated for each survey type and each grantee/provider, followed by a grand average stakeholder satisfaction score across all survey types for each grantee/provider.

Based on LDE's Expanded Learning Provider Evaluation Framework (revised 2/2012; see Appendix A), grantees/providers were awarded points as shown below.

- 0 points - No satisfaction survey submitted
- 7.5 points - More than $50 \%$ of survey responses are negative
- 15 points - $50 \%$ or more of survey responses are positive

If a grantee/provider had no responses for a particular type of survey, this did not count against them in the total stakeholder satisfaction score. If a grantee/provider had no responses across all survey types (i.e., none for parents, none for school staff, and none for program staff) then that grantee/provider received a zero for their stakeholder positive satisfaction score. Each grantee/provider's survey score, from 0 to 15, was calculated into
their overall LDE performance rating, accounting for up to 15 points out of a total 100 performance rating points.

Survey analyses were conducted primarily using descriptive statistics to: 1) calculate and compare the percentage of stakeholder responses for each of the stakeholder survey topics across the programs and stakeholder groups and 2) to provide an overview of the qualitative data to further enrich and inform the quantitative survey findings. The open-ended responses were categorized according to the three general survey topics from the quantitative survey questions.

## Year 3 Results

## What is the impact of LDE's $21^{\text {st }}$ CCLC and SES programs on student academic outcomes?

## $21^{\text {st }}$ CCLC Program

Within the $21^{\text {st }}$ CCLC program, 57 of the total 58 grantees that provided services in Year 3 (includes only grantees with students who had activity data for June 1, 2011, to May 31, 2012 in Cohorts 6, 7, and 7.5) had at least 10 students with achievement scores. The academic assessment of students receiving services was based on two criteria: (1) improvement in at least $50 \%$ of the $21^{\text {st }}$ CCLC students' achievement in ELA and in math and (2) significant positive differences between the $21^{\text {st }}$ CCLC students and matched comparison students not attending any LDE after-school program. Differences were considered statistically significant at $p<.05$; marginally significant values at $p<.1$, are also provided per LDE's request, to allow for greater inclusion of grantees.

Overall, 17 of $57(30 \%) 21^{\text {st }}$ CCLC grantees had impacts (14 at $p<.05$ and an additional 3 at $p<.10$ ) on student math outcomes. Seventeen of $56(30 \%)$ grantees had impacts (12 at $p$ $<.05$ and an additional 5 at $p<.10$ ) on student ELA outcomes.

As Table 2 shows, a total of 38 of the $5721^{\text {st }}$ CCLC grantees ( $67 \%$ ) serving a minimum of 10 students who had 2011 and 2012 achievement data had at least half of their students show improvement in math from 2011 to $2012 .{ }^{3}$ Of these 38, 17 ( $45 \%$ ) showed statistically significant greater improvement in their students' math from 2011 to 2012 compared to matched students not in any of LDE's after-school programs (see Table 2 and Appendix D for statistical analyses output). The improvement in 14 of these grantees was significant at the $p<.05$ level, and for three grantees it was marginally significant at the trend ( $p<.10$ ) level.

One grantee of the $38(3 \%)$ had at least half of their students show less improvement from 2011 to 2012 than that of their matched non-participants; the difference was not statistically significant. Three additional grantees that had less than $50 \%$ of their students show improvement in math from 2011 to 2012 had statistically significantly greater improvement in their matched non-participants than their $21^{\text {st }}$ CCLC students (two at $p<.05$ and one marginally significant at $p<.10$, see Table 2 and Appendix D for statistical analyses output).

Note: Academic achievement statistics for 2012 do not include students tested in the summer term.

Also as seen in Table 2, 31 of the $5621^{\text {st }}$ CCLC grantees ( $55 \%$ ) serving a minimum of 10 students who had 2011 and 2012 achievement data had at least half of their students show improvement in ELA from 2011 to 2012, a smaller proportion than those who showed improvement in math. Of these 31, 17 ( $55 \%$ ) showed statistically significant greater improvement in their students' ELA from 2011 to 2012 compared to matched students not in any of LDE's after-school programs (see Table 2 and Appendix D for statistical analyses output). The difference for 12 of these grantees was significant at $p<.05$, for one it was significant at $p=.05$, and for four it was marginally significant at $p<.10$.

Two grantees of the 31 (7\%) had at least half of their students show improvement in ELA achievement from 2011 to 2012 that was less than that of their matched non-participants, but the difference was not significant (see Table 2 and Appendix D for statistical analyses output). Three additional grantees that had less than $50 \%$ of their students show improvement in ELA from 2011 to 2012 had significantly greater improvement in their matched non-participants than their $21^{\text {st }}$ CCLC students (two at $p<.05$ and one marginally significant at $p<.10$ ).
$21^{\text {st }}$ CCLC Student Outcomes by Site
Academic outcomes for $21^{\text {st }}$ CCLC students with achievement data for 2011 and 2012 are reported below for students in $200{ }^{4}$ of the $21721^{\text {st }} \mathrm{CCLC}$ sites. SEDL completed individual online profile analyses reports for each of the $21^{\text {st }} \mathrm{CCLC}$ sites that provided services in school year 2012. These site reports can be accessed at www.sedlla.com.

Overall, 30 of $200(15 \%) 21^{\text {st }}$ CCLC sites had statistically significant ( 23 at $p<.05$ and an additional 7 at $p<.10$ ) impacts on student math outcomes. Thirty-four $21^{\text {st }} \mathrm{CCLC}$ sites of 199 (17\%) sites had statistically significant impacts on student ELA outcomes (20 at $p<.05$ and an additional 14 at $p<.10$ ).

At least $50 \%$ of the students participating in $21^{\text {st }}$ CCLC programs in 119 of the 200 sites ( $60 \%$ ) serving a minimum of 10 students who had 2011 and 2012 achievement data showed improvement in math from 2011 to 2012 (see Appendix E for a table of $21^{\text {st }}$ CCLC site academic outcomes). Of these 119 sites, 28 ( $24 \%$ ) showed statistically significant greater improvement in their students' math from 2011 to 2012 compared to matched students not in any of LDE's after-school programs. The difference in improvement for 22 of these grantees was significant at $p<.05$, for three grantees $p=.05$, and for another three grantees it was marginally significant at $p<.10$. Two additional grantees that had less than $50 \%$ of their students show improvement in math from 2011 to 2012 also had significantly greater improvement in their $21^{\text {st }}$ CCLC students than their matched non-participants (one at $p<.05$, and one marginally significant at $p<.10$ ).

Sixteen grantees of the 119 (13\%) had at least half of their students show improvement in math achievement from 2011 to 2012, yet their improvement was less than that of their matched non-participants; the difference in improvement was not significant (see Appendix E). An additional 12 grantees that had less than $50 \%$ of their students show improvement in math from 2011 to 2012 had significantly greater improvement in their matched nonparticipants than their $21^{\text {st }} \mathrm{CCLC}$ students (six at $p<.05$ and six marginally significant at $p<$ .10).

[^3]At least half of the $21^{\text {st }}$ CCLC students in 107 of the 199 sites ( $54 \%$ ) showed improvement in ELA from 2011 to 2012 (see Appendix E for a table of $21^{\text {st }}$ CCLC site academic outcomes). Of these 107, 32 ( $30 \%$ ) showed statistically significant greater improvement in their students' ELA from 2011 to 2012 compared to matched students not in any of LDE's afterschool programs. The difference in improvement for 20 of these grantees was significant at $p<.05$, three at $p=.05$, and nine were marginally significant at $p<.10$. Two additional grantees that had less than 50\% of their students show improvement in ELA from 2011 to 2012 had significantly greater improvement in their $21^{\text {st }}$ CCLC students than their matched students, one at $p=.05$ and another marginally significant at $p<.10$.

Thirteen grantees of the 107 (12\%) had at least half of their students show improvement in ELA achievement from 2011 to 2012 that was less than that of their matched nonparticipants, but the difference was not significant (see Appendix E). An additional 10 grantees that had less than 50\% of their students show improvement in ELA from 2011 to 2012 had significantly greater improvement in their matched non-participants than their $21^{\text {st }}$ CCLC students ( 7 at $p<.05$, and 3 marginally significant at $p<.10$ ).

## SES Program

Within the SES program, students received services from 37 providers in 2012; however, three of the providers served less than 10 students with achievement test scores in both math and ELA and an additional provider served less than 10 students who did not have ELA achievement scores. SEDL completed individual online profile analyses reports for all of the 37 SES providers, which can be accessed at www.sedlla.com.

Overall, the SES program had a diminished impact on student outcomes compared with the $21^{\text {st }}$ CCLC program. Only two of $34(6 \%)$ SES providers had a statistically significant impact on student math outcomes ( 1 at $p<.05$ and an additional 1 at $p<.10$ ). Similarly, two of 33 (6\%) providers had a statistically significant impact on student ELA outcomes (1 at $p<.05$ and an additional 1 at $p<.10$ ).

Fifteen of the 34 SES providers (44\%) serving a minimum of 10 students who had 2011 and 2012 achievement data ${ }^{5}$, had at least half of their students show improvement in math from 2011 to 2012 (see Table 3). Of these 15 providers, two (13\%) had students who showed significantly greater improvement in math from 2011 to 2012 compared to matched students (one at $p<.05$, and another at $p<.10$; see Appendix D for statistical analyses output).

Six of the 15 SES providers ( $40 \%$ ) had at least half of their students show improvement in math achievement from 2011 to 2012 that was less than that of their matched nonparticipants, but the difference was not significant. Two additional grantees that had less than $50 \%$ of their students show improvement in math from 2011 to 2012 had significantly greater improvement in their matched non-participants than their SES students (one at $p<$ .05 and another marginally significant at $p<.10$ ).

At least $50 \%$ of the SES students in 19 of the 33 providers (58\%) showed improvement in ELA from 2011 to 2012 (see Table 3). For one of these 19, the difference in improvement was significant at $p<.05$ and for the other it was marginally significant at $p<.10$.

[^4]Six SES providers of the 19 ( $32 \%$ ) had at least half of their students show improvement in ELA achievement from 2011 to 2012 that was less than that of their matched nonparticipants, but the difference was not significant. One additional grantee that had less than $50 \%$ of their students show improvement in ELA from 2011 to 2012 had significantly greater improvement in their matched non-participants than their SES students (marginally significant at $p<.10$; see Appendix D for statistical analyses output).

## What are LDE $21^{\text {st }}$ CCLC and SES program administrators, providers, participants and their families', and school and LEA perceptions regarding overall program satisfaction and impact?

The main objective of the Year 3 satisfaction survey was to determine how satisfied stakeholders (i.e., after-school staff/providers, school administrators/teachers, and participants' parents) were with their affiliated after-school programs. Three stakeholder satisfaction surveys were administered across $21^{\text {st }}$ CCLC grantees and SES providers (see Appendix F for survey forms). As part of LDE's framework for evaluating grantees and providers, SEDL calculated the percentages of customer satisfaction responses across each grantee/provider and stakeholder group. The majority of responses from all stakeholder groups were positive, indicating satisfaction with LDE's after-school programs and perceptions of a positive impact on student outcomes.

There were 11,264 stakeholders across the $21^{\text {st }}$ CCLC and SES programs who completed a satisfaction survey, the majority of which were participants' parents (see Table 4).

Table 4: Number of Completed Stakeholder Satisfaction Surveys Across $21^{\text {st }}$ CCLC and SES

| Program | Parents | Program Staff | School Staff |
| :--- | :---: | :---: | :---: |
| $21^{\text {st }} \mathrm{CCLC}(n=10,417)$ | 7,491 | 1,034 | 1,892 |
| SES $(n=847)$ | 488 | 94 | 265 |
| Total $(N=11,264)$ | 7,979 | 1,128 | 2,157 |

Note. There were $5821^{\text {st }}$ CCLC grantees with 42,154 participants and 37 SES providers with 10,691 participants; therefore, the number of responses for the two programs was expected to be higher for $21^{\text {st }}$ CCLC.

## Survey Findings

Survey findings based on the positive percentage of responses across the $21^{\text {st }} \mathrm{CCLC}$ and SES programs revealed that the only grantees/providers that did not receive positive responses above the $50 \%$ threshold were those who had no responses across all survey types. Survey responses across the $21^{\text {st }} \mathrm{CCLC}$ and SES programs and stakeholder groups were mostly positive and praiseworthy related to the three general survey topics: communication, satisfaction, and impact. However, some stakeholders shared concerns related to strengthening communication and collaboration, the quality of time spent on homework and engaging instruction, as well as expanding hours and reach to more students.

Table 5 shows the average percentages of positive responses among stakeholders for all grantees/providers that responded to at least one of the stakeholder surveys.

Table 5: Average Stakeholder Satisfaction for $21^{\text {st }}$ CCLC and SES

| Program | Parents | Program Staff | School Staff | AVERAGE |
| :--- | :---: | :---: | :---: | :---: |
| $21^{\text {st }}$ CCLC | $94 \%$ | $94 \%$ | $89 \%$ | $92 \%$ |
| SES | $92 \%$ | $92 \%$ | $91 \%$ | $92 \%$ |

Table 6 shows survey results based on the percentage of positive survey responses provided by stakeholders for each $21^{\text {st }}$ CCLC grantee. The percentage of positive survey responses for SES providers is shown in Table 6.

Over 90\% of parents and school staff across both after-school programs reported positively about communicating with program staff, including regarding students' progress. Over 80\% of program staff indicated that they communicated frequently with parents, school staff, and with each other regarding curriculum coordination, homework, and students' progress. Communication between school and program staff was less frequently reported for $21^{\text {st }}$ CCLC than SES, but the opposite was true for communication between program staff and other stakeholders in general, with $21^{\text {st }}$ CCLC reporting more frequent contact within the program, and with parents and school staff. Although stakeholders generally reported positively about communication, they were reportedly less satisfied with this issue than with the after-school services provided in general and academic impact of the programs. Responses to open-ended questions suggest that parents and school staff mainly appreciated the quality of program staff relationships with students, which were described as caring, friendly, respectful, and showing a commitment to helping children/students succeed.

In relation to after-school program services, over $90 \%$ of all stakeholders across both programs reported being satisfied and expressed praise for the variety of engaging activities offered, additional instruction, and help with homework. For $21^{\text {st }}$ CCLC, parents and program staff reported to be the most satisfied with services and school staff were the least satisfied with services; for SES, program staff reported being the most satisfied and parents the least satisfied with services. Overall, school staff tended to be less satisfied with program services when compared to parents and program staff.

Although perceptions of impact on student learning and interest in school were also overwhelmingly positive, school staff (over $80 \%$ ) tended to be less satisfied with program impact as compared to parents and program staff (over $90 \%$ ). For $21^{\text {st }}$ CCLC, parents were again the most satisfied with academic impact, whereas for SES, program staff was the most satisfied. Many parents reported seeing improvements in their child's reading, writing, and math skills as well as general interest in school.

## Evaluation Summary

The above findings indicate that LDE's after-school programs had mixed results in 2012. Over $50 \%$ of all $21^{\text {st }}$ CCLC grantees and SES providers had at least half of their students show some improvement in ELA from 2011 to 2012. About $30 \%$ of $21^{\text {st }}$ CCLC grantees had statistically significant impacts on student ELA outcomes compared to only $6 \%$ of SES providers.

In terms of math achievement, over 60\% of $21^{\text {st }}$ CCLC grantees and 40\% of SES providers had at least half of their students show some improvement from 2011 to 2012. Growth levels were significantly higher for almost half ( $45 \%$ ) of these $21^{\text {st }}$ CCLC participants as compared to matched students. Of the SES participants, the percent was much smaller (13\%) for those that outperformed matched students in math. For ELA achievement, more than 50\% of $21^{\text {st }}$ CCLC grantees and SES providers had at least half of their students show improvement from 2011 to 2012. Growth levels in ELA were significantly higher for almost half ( $55 \%$ ) of these $21^{\text {st }}$ CCLC participants as compared to matched students; however, for only about ten percent of the SES participants. Additionally, students in two $21^{\text {st }}$ CCLC grantees showed a level of growth that was significantly less than that of their matched counterparts in ELA and in math; one SES provider had a similar result in math only.

Perceptions from stakeholders of LDE's after-school programs - participants' parents, school staff and teachers, and program staff -were largely positive for both $21^{\text {st }} \mathrm{CCLC}$ grantees and SES providers and indicated they were generally satisfied with LDE's afterschool programs. Many stakeholders emphasized the quality of program staff and their commitment to students as well as observed improvements in children's engagement in school. However, some stakeholders expressed less satisfaction with the frequency of communication as well as the hours of operation and reach of some after-school programs.

Strengths and limitations in design and/or methodology are inherent to any evaluation study and define the robustness and generalizability of the conclusions that can be drawn from the results. To assess statewide program impacts on students, the present evaluation included over 20,000 students attending Louisiana afterschool programs in 2012. The data collected depended heavily on archival data that had considerable levels of missing or inaccurate data, came from disparate sources of data that did not easily "cross-walk", and lacked important information on program-specific factors. Louisiana is one of a few states that have strengthened their state evaluations by using quasi-experimental designs to assess the impact of their afterschool programs. While the quasi-experimental study design provides a reliable and valid method to estimate statewide program impacts on students, it does not establish causal program impacts. Assessing program stakeholder satisfaction is another strength of this evaluation. However, the survey methodology lacked a defined stakeholder population for the administration of the surveys, and therefore reported stakeholder perceptions may not be representative of the sample. These factors should be considered in interpretations of the evaluation findings.

## Appendix A:

## LDE 2012 Expanded Learning Provider Evaluation Framework

## LOUISIANA'S EXPANDED LEARNING PROVIDER EVALUATION FRAMEWORK (REV 2/2012)

The following chart depicts the REVISED framework for Louisiana's evaluation of after-school providers. Provider effectiveness will be assessed through the following outcome-based factors:

- Academic achievement 85\% - Stakeholder satisfaction $15 \%$.

As all programs MUST meet program compliance, no rating will be given for this area. Rating will be determined using the following process:

## STEP ONE: Academic Effectiveness (85\% of total rating points)

| Points Given | Definition for Points |
| :---: | :--- |
| 0 | After-school grantee/provider/site has statistically significantly less academic improvement in <br> ELA or math in comparison to matched students not in LDE after-school program |
| 28.33 | After-school grantee/provider/site has less academic improvement in ELA or math in <br> comparison to matched students not in LDE after-school program |
| 56.66 | After-school grantee/provider/site has more academic improvement in ELA or math in <br> comparison to matched students not in LDE after-school program |
| 85 | After-school grantee/provider/site has statistically significantly more academic improvement <br> in ELA or math in comparison to matched students not in LDE after-school program |

## STEP TWO: Stakeholder Satisfaction ( $15 \%$ of total rating points)

| Points Given | Definition for Points |
| :---: | :--- |
| 0 | No satisfaction surveys submitted. |
| 7.5 | More than $50 \%$ of survey responses are negative. |
| 15 | $50 \%$ or more of survey responses are positive. |

## Total Points $\mathbf{= 1 0 0}$

Performance Rating

| Points Given | Rating |
| :---: | :---: |
| $80-100$ | Exemplary |
| $60-79$ | Satisfactory |
| $30-59$ | Probation |
| $0-29$ | Termination |

| Program Impact |  |  |
| :---: | :---: | :---: |
| Exemplary | 80-100 | The provider has met compliance requirements, demonstrated positive achievement effects with significantly more academic improvement in ELA or math, and demonstrated positive stakeholder satisfaction responses. The provider is recommended to apply for the next year application process in the following year. |
| Satisfactory | 60-79 | The provider has met compliance requirements, demonstrated positive achievement effects, and demonstrated positive stakeholder satisfaction responses. The provider is recommended to apply for the next year application process in the following year. |
| Probation | 30-59 | The provider has met compliance requirements or has minor compliance violations and has not demonstrated positive achievement effects. MUST SUBMIT A CORRECTIVE ACTION PLAN WITHIN 30 DAYS OF DESIGNATION. FAILURE TO ADDRESS DEFICIENCIES WILL RESULT IN REMOVAL. Provider can be in Probation status for only one year. |
| Termination | 0-29 | The provider has serious compliance violations and/or has not demonstrated positive achievement effects and positive stakeholder satisfaction responses. The provider also may have been on Probation status the prior year and failed to produce positive achievement effects. PROGRAM WILL BE LABELED AS ‘HIGH RISK’ AND, MUST SHOW PROGRAM EFFECTIVENESS TO APPLY FOR FUTURE FUNDING |

## Appendix F: Parent, School, and Staff Survey Forms

Louisiana After-School Evaluation 2012 PARENT SURVEY

Thank you for participating in our evaluation of Louisiana's after-school programs. This survey should take no more than 5 minutes to complete. Your responses will be strictly confidential and will not be used to evaluate you, your child, nor any after-school staff members. If you have any questions, please contact Leida Tolentino at 1-800-476-6861, ext. 6572 or ltolentino@sedl.org.

## Surveys Must be Completed by April 13, 2012

1. Which after-school program does your child attend? (Please be very specific: Is it a $\mathbf{2 1}^{\text {st }}$ CCLC or SES program? What's the program, provider, and site name? Where is it located? Add an explanation if your child is affiliated with more than one program/provider.)
2. Please let us know how you feel about the following statements regarding your child's afterschool provider:

|  | Never | Sometimes | Always | Don't Know |
| :--- | :---: | :---: | :---: | :---: |
| a. I have a voice in what my child's after-school provider <br> offers. | O | O | O | O |
| b. I feel comfortable talking with the after-school staff <br> about my child's progress. | O | O | O | O |
| c. I am promptly told about changes in the program or <br> after-school policies. | O | O | O | O |
| d. The staff shows me ways to help my child with his/her <br> homework. | O | O | O | O |

3. Please tell us how happy you are with your child's after-school provider.

| I am happy with the: | Not at all | Moderately | Extremely | Don't Know |
| :--- | :---: | :---: | :---: | :---: |
| a. After-school provider overall. | O | O | O | O |
| b. Type of activities offered. | O | O | O | O |
| c. Hours of operation. | O | O | O | O |
| d. Quality of instruction offered. | O | O | O | O |

4. Please tell us how satisfied you are with the after-school's impact over the past year.

|  | I am satisfied with the after-school's impact on: | Not at all | Moderately | Extremely | Don't Know |
| :--- | :--- | :---: | :---: | :---: | :---: |
| a. | My child's overall learning. | O | O | O | O |
| b. | My child's reading / writing skills. | O | O | O | O |
| c. | My child's math skills. | O | O | O | O |
| d. | My child's interest in school. | O | O | O | O |

5. What do you like best about your child's after-school provider?
6. What are some things about your child's after-school provider you would like to see changed?
7. Please let us know any additional comments you may have.

## THANK YOU!

Thank you for participating in our evaluation of Louisiana's after-school programs. This survey should take no more than 5 minutes to complete. Your responses will be strictly confidential and will not be used to evaluate you, any child, nor any after-school staff members. If you have any questions, please contact Leida Tolentino at 1-800-476-6861, ext. 6572 or Itolentino@sedl.org.

## Surveys Must be Completed by April 13, 2012

1. With what after-school program and site are you affiliated? (Please tell us if it is a $\mathbf{2 1}^{\text {st }}$ CCLC or SES program, the program/provider name, site name, and location. Add an explanation if you are affiliated with more than one program/provider.)
2. What is your role?

O Principal or other school administrator
O School programs coordinator
O Teacher

- Other: (please describe
- Explanation, if needed:

3. Please let us know your perceptions on the following:

|  | Never | Sometimes | Often | Don't Know |
| :--- | :--- | :--- | :---: | :---: |
| a. After-school staff communicate with me: |  |  |  |  |
| • To coordinate curriculum. | O | O | O | O |
| - Regarding homework. | O | O | O | O |
| - To set goals for student growth. | O | O | O | O |
| - About students' progress. | O | O | O | O |
| b. After-school content is aligned with state academic <br> content and achievement standards. | O | O | O | O |
| c. Adjustments are made in after-school practices based <br> on data about student learning. | O | O | O | O |

a. After-school staff communicate with me:

- To coordinate curriculum.
- Regarding homework.
- To set goals for student growth.
- About students' progress.
b. After-school content is aligned with state academic content and achievement standards.
c. Adjustments are made in after-school practices based on data about student learning.

O Teaching assistant or aide
O Curriculum specialist
O Counselor or other supportive services
$\qquad$ )
4. Please tell us how satisfied you are with the following after-school program/services:

|  |  | Not at all | Moderately | Extremely | Don't Know |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | I am satisfied with the: | O | O | O | O |
| a. | After-school provider overall. | O | O | O | O |
| b. | Management of the program. | O | O | O | O |
| c. | Hours of operation. | O | O | O | O |
| d. | After-school staff. | O | O | O | O |
| e. | Quality of instruction offered. | O | O | O | O |
| f. | Amount of contact I have with the after-school staff. | O |  |  |  |

5. Please tell us how satisfied you are with the after-school program's impact on:

|  |  | Not at all | Moderately | Extremely | Don't Know |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | I am satisfied with the program's effects on: |  |  |  |  |
| a. | Students' overall learning. | O | O | O | O |
| b. Students' reading/writing skills. | O | O | O | O |  |
| c. | Students' math skills. | O | O | O | O |
| d. | Students' interest in school. | O | O | O | O |

6. What do you like best about the after-school program?
7. What are some things you would like to see changed about the after-school program?
8. Please let us know any additional comments you may have.

## THANK YOU!

Thank you for participating in our evaluation of Louisiana's after-school programs. This survey should take you about 5 minutes. Your responses are strictly confidential and will not be used to evaluate you or any child in your after-school program. If you have any questions, please contact Leida Tolentino at 1-800-476-6861, ext. 6572 or ltolentino@sedl.org.

## Surveys Must be Completed by April 13, 2012

1. With what after-school program/provider are you affiliated? (Please tell us if you are a $21^{\text {st }}$ CCLC or SES program, the program/provider name, site name, and location. Add an explanation if you are affiliated with more than one program/provider.)
2. What is your role with after-school? (Please add an explanation if you serve in more than one role.)
O LEA Grant Administrator or Coordinator
O Counselor/supportive services
O Program Director/Coordinator/Other Administrator
O Intern/assistant
O Instructor/Tutor/direct services to student
O Volunteer

O Site Administrator/Coordinator

- Other: (please describe $\qquad$ )
- Explanation, if needed:
- 

3. Please let us know your perceptions on the following:
Never Sometimes Often Don't Know
a. After-school staff communicate with the students' school teachers:

- To coordinate curriculum.
- Regarding homework.
- About students' progress.
b. After-school staff spend time with parents:
- Discussing their child's progress.
o
o
c. After-school staff meet with:
- Each other.
- Their students' school administrators.
d. After-school staff has a caring and respectful relationship with all students.
o
o
O
e. After-school content is aligned with state academic content and achievement standards.

O
O
O
O
f. Adjustments are made in after-school practices based on data about student learning.

O
O
O
O
g. After-school staff has a voice in the after-school content offered.
4. Please tell us how satisfied you are with the following after-school program/services:

|  | Not at all | Moderately | Extremely | Don't Know |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
| I am satisfied with the: | O | O | O | O |  |
| a. | After-school provider overall. | O | O | O | O |
| b. Management of the program. | O | O | O | O |  |

Note: Academic achievement statistics for 2012 do not include students tested in the summer term.

[^0]:    1 The total number of LDE students in 2011-2012 was 703,390. Statistic retrieved from http://www.louisianaschools.net.

[^1]:    2 LAA 1 is an alternate assessment for students whose Individualized Education Programs (IEPs) address the state's academic Extended Standards and functional academic and life skills. LAA 2 is an alternate assessment for students who demonstrate persistent academic disabilities as indicated in their IEP and who meet additional criteria that the LDE requires. Students taking LAA 2 may take other assessments as well, such as the LEAP or iLEAP.

[^2]:    3 One $21^{\text {st }}$ CCLC grantee had fewer than 10 students with 2011 and 2012 math achievement data and two grantees had fewer than 10 students with ELA achievement data; therefore, analyses for these individual grantees are not reported and the total number of grantees equals 57 and 56 for math and ELA, respectively.

[^3]:    4 Seventeen $21^{\text {st }}$ CCLC sites had fewer than 10 students with 2011 and 2012 math achievement data; 18 sites had fewer than 10 students with ELA achievement data. Therefore, analyses for these individual sites are not reported and the total number of sites equals 200 and 199 for math and ELA, respectively.

[^4]:    5 Three SES providers had fewer than 10 students with 2011 and 2012 math achievement data; four providers had fewer than 10 students with ELA achievement data. Therefore, analyses for these providers are not reported and the total number of providers equals 34 and 33 for math and ELA, respectively.

[^5]:    Highlighting indicates results are statistically significant at $p<.1$
